MAIN ROADS
Western Australia

The Traffic Operation Centre uses a variety of computer applications to monitor and analyse road traffic conditions 24 hours a day and is also a central contact point for real time traffic information.

Groups can view the operations centre from the purpose built Mezzanine level, which is also equipped with a specially designed interactive station. This demonstrates exactly how the systems work and gives a practical insight into traffic management within Western Australia.

The tours include an overview of the centre, and a video that explains the construction and maintenance of the Graham Farmer Freeway traffic tunnel and how traffic is managed in the metropolitan area.

Everyone Welcome!

RSVP ieeegoldwa@gmail.com by 27th June 2007.

When: 2:45pm for 3:00pm start on Friday 29/06/07.

Where: Traffic Operations Centre; Corner of Lord Street & Newcastle Street. Entrance -Newcastle Street.
